

# Cloud Types

By Mary

This is a Cirrus cloud: they're high ice clouds that look like wispy curls

This is a Cirrocumulus cloud: These clouds often signal unsettled weather.

This is a Cirrostratus Cloud: Sometimes these clouds make a halo effect around the sun when you see this it means rain is approaching

This is an Altocumulus Cloud: It is a thin sheet of white or grey cloud broken into blobs, rolls, waves or bands.

This is an Altostratus Cloud: Its a thin layer of grey cloud through which sunlight is visible, if the cloud thickens it may rain.

This is a Nimbostratus Cloud: It's a thick grey cloud they make rain and snow.

This is a Stratocumulus Cloud: it's a low cloud broken into rolls or patches it's usually in a regular pattern.

This is a Stratus Cloud: it's a low grey cloud that often produces light rain and drizzle.

This is a Cumulus Cloud: this is a fluffy cloud with a flat base, these are often seen on sunny days.

This is a Cumulonimbus Cloud: These clouds often indicate a thunderstorm is on the way!
